Dyscalculia.io review: a free dyscalculia test and number games

Peabody blog · Math · updated 2026-11-09

A free dyscalculia screening test, number-sense games, math tools and worksheets with no sign-up or ads, plus a paid daily program. What it costs and how it handles data.

Dyscalculia.io is a site made for children and adults who find numbers hard. Its free dyscalculia screening test, six number-sense games, math tools and 26 printable worksheets need no account and show no ads. A paid daily program builds on the test, for $9.99 a month or $39.99 a year. Its maker, Oliver, wrote to us with the facts for our math directory, and we're glad he did: few math sites are built for the kids who struggle most, and this one is built with care. We've added it to our list of the best math games for kids at number four. Peabody (peabody.kids) is free for everyone through the end of 2026.

We make Peabody, which also has math games, so weigh our view with that in mind. We wrote this from Dyscalculia.io's public pages on 9 November 2026 and have not used the paid program hands-on.

What's free, with no sign-up

- A screening test. Five short number games in the browser, under five minutes, ending in a skills profile. The answers stay in your browser unless you make an account. There's a version for adults too.
- Six number-sense games (Berry Count, Muffin Ten, Dragon Snack, Rocket Line, Fox Market and Lantern Memory), for seeing amounts at a glance, making ten and placing numbers on a line.
- Hands-on tools: a ten frame, number bonds, a subitizing trainer, a place value chart, skip counting and math vocabulary. Good for any young learner, not just kids with dyscalculia.
- 26 printable worksheets under a CC BY 4.0 licence, so teachers can share them freely.
- Plain guides for parents on symptoms, diagnosis, accommodations and how dyscalculia differs from dyslexia.

The paid program (November 2026)

- Plan: Free with an account · Price: $0, no card · What you get: Level 1 of every game in each age world
- Plan: Monthly · Price: $9.99 a month · What you get: All 196 levels, 10 exercise types
- Plan: Yearly · Price: $39.99 a year (about $3.33 a month) · What you get: The same, 67% less than monthly

The program is 5 to 10 minutes a day, puts the child's weakest skill first and adjusts to

accuracy and speed. Four age worlds with a fox guide run from age 4 to adult, and a parent area sets a daily goal and a time limit. Payments go through Creem. There's no trial on paid plans and no refunds, but you can cancel in two clicks and keep access to the end of the period, so play the free levels first. It's on the web, with a separate Android app; there's no iOS app.

Privacy

This is where Dyscalculia.io shines. It shows no ads, does no ad or cross-site tracking and sells no data. It never asks for a child's name, email or photo. An adult makes the account, and you can delete it and its data yourself from the parent area.

How to use it at home

Start with the free test on a calm day, not after a hard homework night, and sit beside your child rather than watching over their shoulder. Treat the profile as a map of where to play, not a grade. Then pick one game from the weakest skill and play it for five minutes a day for a week. Short and often beats long and rare, especially for a child who has learned to dread numbers.

Mix in real objects too. A ten frame works just as well with egg cartons and dried beans, and counting stairs, setting the table and sharing snacks are number sense in disguise. Read a story from our library together afterwards, so math time ends on something easy and warm.

If the free half fits and your child asks to keep going, the yearly plan works out cheaper than one tutoring session a month.

Good to know

Dyscalculia.io says it plainly, and so will we: a screening test isn't a diagnosis. If the profile worries you, take it to your child's teacher or a qualified professional. As a gentle place to practice the number sense that everything else in math rests on, it's a lovely, honest resource, and the free half alone is worth a bookmark.
