Printable quizzes for kids, with answers: four layouts, two versions

Peabody blog · Teaching · updated 2026-10-30

Printable quizzes for kids with answers: three boxes, fill the blank, short answer or exit tickets, versions A and B, an answer key and a bubble sheet. Free.

Peabody Teach's quiz maker prints quizzes for kids in four layouts (three boxes, fill the blank, short answer and exit tickets), with an answer key on its own page, an optional version B in a different order, and a bubble sheet. The questions come from a built-in bank for kindergarten to 8th grade or from a list you paste, and what you see on the screen is exactly what prints. It needs no sign-up, and Peabody is free through the end of 2026.

This post is about the paper: what each page looks like, what the key shows, and how versions A and B and the bubble sheet work.

What every page has

Each quiz page carries a title (yours, or the name of the source, such as "The 7 times table"), a Name line and a Date line, and one line of directions at the top. When you print two versions, the page says Version A or Version B under the title. A small "Free at teach.peabody.kids" sits in the footer, and a quiz that runs past one page says "Page 1 of 2".

The Print button tells you how many pages are coming, key and bubble sheet included, before you send it to the printer. To keep a PDF, choose Print, then Save as PDF as the printer; only the sheets print, not the page around them.

The four layouts

- Layout: Three boxes · Directions printed: "Fill in the circle next to the best answer." · Questions to a page: 10 · Best for: Facts, word meanings, quick checks
- Layout: Fill the blank · Directions printed: "Write the answer on the line." · Questions to a page: 15 · Best for: Math facts with a line, spelling a heard word
- Layout: Short answer · Directions printed: "Answer each question in a sentence or two." · Questions to a page: 6 · Best for: Reading passage questions
- Layout: Exit ticket · Directions printed: "Answer before you leave." · Questions to a page: Up to 3 on each ticket · Best for: The last minutes of a lesson

Three boxes puts a lettered circle (A, B, C) next to each answer. Math facts print as "7 × 6 = ?", so the question reads as a question.

Fill the blank prints one line after each question; "7 × 6 =" is followed by the line.

Short answer gives three writing lines a question, which is why only six fit on a page.

Exit ticket prints up to three questions on a quarter sheet, four tickets to a page with cut lines. When the questions or answers are long, such as a reading passage's sentences, the tickets print two to a page as half sheets so nothing is cut off. For prompts like 3-2-1 instead of questions, the separate exit ticket maker is the better fit; see the exit ticket template post.

The answer key

The key prints on its own page after the quiz, marked "For the teacher". For a three-box quiz it lists each question's letter and the answer, so you can mark down a column fast. For fill the blank and short answer it lists the answer alone.

If you print two versions, the key holds both, a list for A and a list for B. Sight word quizzes are a special case: the student's sheet just says "Listen", and the key carries the words to read aloud, in order, for each version. That way the printed sheet never gives the word away.

Versions A and B

Tick Versions A and B and the maker prints the same questions twice, in a different order, with each question's answer boxes shuffled again. Version B is never left in the same order as A. Hand A and B to neighbors and a glance across the table finds a different question in the same spot.

Because the two versions hold the same questions, they are equally hard. The one key covers both.

The bubble sheet

Tick Bubble sheet (it appears in the three-box layout) and a separate answer sheet prints after the key: a numbered row of A, B and C circles for every question, in columns of ten, with a Name and Date line. With two versions it adds "Circle your version: A B" at the top.

Students keep the question sheet clean and fill in the bubble sheet, so you can reuse a class set of question sheets and mark one page per child. The bubble sheet is left off if any question has no boxes. That can happen with a pasted list when the maker can't find two different wrong answers for a question; it tells you so, and that question prints with a line to write on.

Where the questions come from

- The bank: math facts (adding, taking away, times tables, dividing), sight words, and word meanings, from Peabody's practice games.
- A passage: one of Peabody's reading passages for kindergarten to 8th grade, with its own questions and vocabulary.
- My list: your questions, one a line, as "question: answer".

The full counts are on what the quiz bank holds. The math quiz post goes deeper on the facts and their wrong answers.

Nothing sent

The quiz is made in your browser from the bank. Your settings and anything you paste stay there, and no AI writes the questions. The quiz maker says it plainly next to the list box: don't put students' names in a quiz. If the class finishes early, Peabody's free stories are leveled from the first readers to 8th grade.

Questions

Where can I find printable quizzes for kids with answers?

Peabody Teach's quiz maker prints quizzes for kindergarten to 8th grade with an answer key on its own page. Pick a grade and a layout and press Print; it is free through the end of 2026 and needs no sign-up.

How do I stop students copying on a quiz?

Tick Versions A and B. Both versions hold the same questions in a different order, with the answer boxes shuffled again, and one key covers both. Give neighbors different letters.

Can I print a bubble sheet with my quiz?

Yes, in the three-box layout. Tick Bubble sheet and an answer sheet with A, B and C circles for each question prints after the key, with a place to circle the version.
