A free worksheet generator for teachers: math, spelling, handwriting, cloze

Peabody blog · Teaching · updated 2026-10-30

A free worksheet generator for teachers: math sheets in three versions with keys, spelling tests from your list, handwriting pages and cloze. No sign-in.

Peabody Teach has five free worksheet generators for teachers, none of which needs a sign-in: a math worksheet generator that prints up to three versions with an answer key, a spelling maker that turns your weekly list into a practice sheet and a test, a handwriting maker for cursive practice and name pages, a cloze maker for fill-in-the-blank reading, and ready-made math worksheets by topic. Each one builds the sheet in your browser, so what you type stays on your computer. Peabody is free through the end of 2026.

Here is what each one makes, and which to open for which job.

Which maker for which job

- You need: Practice on one math skill, or a mixed review · Open: Math worksheet generator · What prints: 6 to 40 problems, versions A, B and C, an answer key
- You need: A math sheet right now, no choices · Open: Math worksheets by topic · What prints: A ready sheet in three versions with keys
- You need: This week's spelling words · Open: Spelling maker · What prints: Practice sheet, test, teacher's copy, scramble
- You need: Handwriting or cursive practice · Open: Handwriting maker · What prints: Model lines, dotted tracing, blank guide lines
- You need: A reading check on any text · Open: Cloze maker · What prints: The text with blanks, a word bank, a key

Math worksheet generator

Pick a skill and its number range, such as addition within 100 with regrouping, and the sheet on the right is the sheet that prints. The skills run from counting to equations: adding and subtracting, place value, multiplication and division facts, long division, fractions, decimals, money, time, measurement, order of operations, integers, percent and ratios.

The choices a teacher actually changes are all there:

- How many problems: 6 to 40 on a sheet.
- How many versions: one, two or three (A, B and C). Where the skill has enough different problems, no problem repeats across the versions.
- Stacked or on a line. Whole-number and decimal work can be stacked the way students write it, and division prints with a bracket.

- Regrouping: never, always, or some with and some without, for adding and subtracting.
- Mixed review: tick it and put up to six skills on one sheet, shuffled, or start from a ready-made mix.
- Answer key, a name line, your own heading, and Letter or A4 paper.

Every sheet comes from a sheet set number, so the same settings always make the same sheets and keys, and a Share link rebuilds them for the teacher next door. The settings ride after the # in the link, a part browsers never send to a server.

If you'd rather not choose anything, math worksheets by topic has 44 ready pages, from addition within 10 to percent and equations, each one a setting of the same generator with three versions and keys.

Spelling maker

Paste this week's words, one a line (a spreadsheet column or a comma list works too), up to 40. You get:

- A practice sheet, ten words to a page, with columns for look and say, write, check, write again, and check. Students fold the word column back so it is hidden while they write.
- A test with numbered lines, and a teacher's copy numbered the same way to read from. Mix up the test order and both are mixed the same way.
- A scramble, with an optional word bank and an answer page.

Under the sheets are links that open the bingo card generator, the word search maker or flashcards with your list already typed in.

Handwriting maker

Type any words, or paste a class list. Each line can be a model then dotted tracing, a model then dots that fade from dark to light, dotted only, or blank guide lines, at the slant and line height you choose. Green dots show where the pencil starts, and stroke arrows can be switched on for new writers.

For a class, choose One page for each student and paste up to 40 first names: each child gets a page of their own name. The class list is kept in this browser only and is never put in the Share link. More on cursive is in the handwriting worksheets post.

Cloze maker

Paste a paragraph from your lesson, or start from one of Peabody's reading passages. Choose how the blanks are picked: every 5th to 10th word (the first sentence stays whole), longer words only, so the blanks test meaning rather than grammar, or the words you tap. A sheet holds up to 25 blanks. A line under the box says roughly what grade the text reads at. Leave the word bank on for younger readers, and the key prints on its own page with a

reminder to accept any word that fits.

And the quiz maker

For a quiz rather than practice, the quiz maker prints math facts, sight words, word meanings or passage questions with three answer boxes, versions A and B and a bubble sheet. The math quiz post explains how its wrong answers are chosen.

What they share

None of the five asks for an account or sends what you type anywhere. To save a PDF, choose Print, then Save as PDF. Pair a spelling week with reading time from Peabody's free stories, leveled from the first readers to 8th grade.

Questions

Is there a free worksheet generator for teachers with no sign-in?

Yes. Peabody Teach's math, spelling, handwriting and cloze makers are free through the end of 2026, need no sign-in. Each builds the sheet in your browser and prints it.

Can I make math worksheets with answer keys?

Yes. The math worksheet generator prints up to three versions of a sheet with an answer key that covers all of them, for skills from counting to equations, with 6 to 40 problems a sheet.

Can I make a spelling test from my own word list?

Yes. Paste up to 40 words into the spelling maker and it prints a practice sheet, a numbered test, a teacher's copy to read from and a scramble, with links to make bingo or a word search from the same list.
